+91 91049 99193 in/amitxparmar Portfolio

PROFILE

Full-Stack Engineer working across distributed backends, real-time chat, and AI applications. Project experience covers event-driven checkout, hybrid search with source citations, and offline messaging sync. Focused on reliable systems, practical error handling, and shipping complete features end to end.

EXPERIENCE

- TecIT Logic, Full-stack Engineer (freelance)** Apr 2026 – Apr 2026
- Shipped end-to-end features with React, Node.js, PostgreSQL + Supabase, using DB schema + wireframes as source of truth.
 - Migrated to feature-based modular architecture + AI-assisted PR workflow; cut onboarding time ~50% and merge conflicts.
- MetaDev, Front-end Developer (remote)** Mar 2023 – Jun 2023
- Built reusable Next.js + Tailwind components in Agile sprints; improved dev speed ~20%.

SKILLS

Frontend React, Next.js, TailwindCSS, Zustand, TanStack Query	Backend Node.js, Express.js, FastAPI, RabbitMQ, Postgres, Prisma, MongoDB, Redis, Socket.io, BullMQ
Languages & DevOps JavaScript, TypeScript, Python, Linux, Docker, AWS EC2, Git	AI LangGraph, pgvector, LiteLLM, HyDE / RRF

PROJECTS

- Agentic Research Workspace** , FastAPI, LangGraph, Cohere, pgvector, Redis, Next.js Jun 2026 – Present
- Engineered a hybrid retrieval RAG pipeline combining HyDE, pgvector dense search, and Postgres full-text search fused via RRF, with Cohere reranking to stream citation-grounded answers over SSE.
 - Deployed a LangGraph ReAct agent with structured Pydantic validation and automated Groq-to-OpenRouter failover, preventing service downtime when primary LLM APIs hit rate limits.
 - Architected asynchronous document ingestion for PDFs and code repositories using ARQ workers and Redis, keeping PostgreSQL + pgvector as the single source of truth to eliminate vector-store sync drift.
- ModularMart** , Microservices, RabbitMQ, NestJS, Postgres, Stripe, API Gateway Mar 2026 – Jun 2026
- Architected an event-driven platform across 5 NestJS services via RabbitMQ topic exchanges and Saga choreography, decoupling order, catalog, payment, and notification domains.
 - Built failure-safe checkout using Postgres transactions, pessimistic locking, the transactional outbox pattern, idempotent consumers, and DLQs to eliminate race conditions and double charges.
 - Integrated Stripe and Kong Gateway with JWT edge auth, Redis rate limiting, and distributed correlation ID tracing across services.
- QuickChat** , BullMQ, Redis, Typescript, NextJs, Socket.io Feb 2026
- Architected fault-tolerant reconnection protocols for a real-time chat service using Socket.io and Redis Pub/Sub; implemented exponential backoff with jitter and keyset-based pagination to prevent reconnection storms and eliminate message loss during disconnects.
 - Reduced real-time server overhead by scoping presence broadcasts to first/last socket per user, caching socket-auth user snapshots in Redis (15m TTL), and collapsing presence heartbeats to a single Redis pipeline round trip.
 - Built local-first messaging using Dexie.js and Zustand with optimistic UI updates, offline queues, and idempotent synchronization to prevent message loss across unstable network connections.

EDUCATION

- Full-stack Development Bootcamp - JavaScript knowledgeHut by upGrad.com** Feb 2024 – Nov 2024 | Bangalore (online)
- Bachelor of Computer Applications, Saurashtra University** Jul 2021 – Apr 2024 | Rajkot, India
